

A202

Total Mark: 25.6

Details:

Q1: 3/3 (complete)

Q2: 4.5/5

Feedback:

Using this approach, there is a possibility that a numerical attribute is not detected if it is stored as a string rather than a numeric data type.

Q3: 4/4 (empty)

Q4: 3.5/4

Feedback:

You must use a paired statistical significance test to determine whether the observed performance differences are statistically significant.

Q5: 10.6/14

Soundness mark: 3.6/4

The report was is not comprehensive. It must include all the implementation details, the cost values, the hyper parameter selection process, etc (−0.4)

Prediction correctness mark: 7/10

The misclassification cost of your submitted predictions is 45435, which ranks 6'th among 11 valid submissions in the class. The lowest cost in this class is 42205 and the highest is 92830. The prediction correctness mark is based on the rank and the difference of your cost value from the one ranked ahead of yours.
